

“The engine of  
real growth in  
Web3”

**ROX Protocol**

# ¿What is ROX Protocol?

ROX Protocol is a decentralized AMM designed to rebuild the way value is distributed within the DeFi ecosystem.

It enables any user to participate as a market maker, generating real and sustainable revenue.

# How does the engine work?

## USDT Deposit

The user deposits USDT into the protocol.

## Automatic Purchase

The protocol automatically buys ROX and BIN.

## Yield

It generates sustainable income and stabilizes the market.

## Locked Liquidity

Permanent liquidity is formed to support the price.

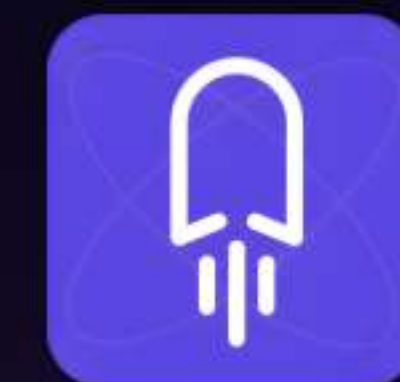

**ROX Protocol**

# Dynamic Rewards

**ROX Protocol Reward Systems**

# Yield Products

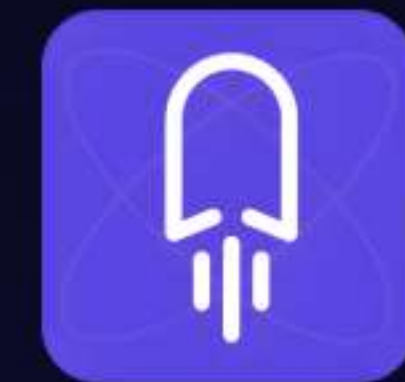

Fixed-term-type deposits in DeFi with a minimum of 100 USDT (BEP20)

Cycle	Daily Rate	Total Yield	Net return
1 day	0.3%	Simple	
15 days	0.9%	14.38% total production	8%
30 days	1.5%	56.31% total production	30.97%

Deposit USDT

Withdraw USDT + earnings

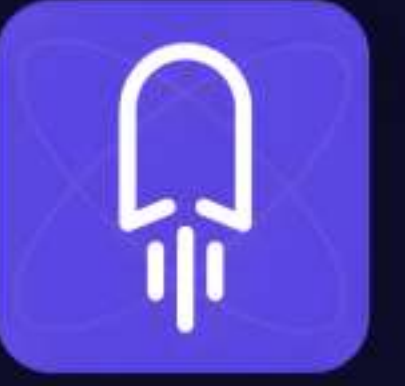

# Earnings Example

**Stake \$10,000 for 30 days**  
**\$5,631 Market-Making Profit**

This example demonstrates the earning potential when participating in the ROX protocol. By staking \$10,000 USDT for 30 days, the system automatically generates significant profits thanks to the market-making model and compound reinvestment.

The daily rate of 1.5% compounds to deliver a total return of 56.31% over the 30-day cycle, resulting in a profit of \$5,631.

# 1. Static Personal Yield

The market-making profit (\$5,631) is combined with the static personal yield percentage to determine the final benefit.

$$\mathbf{\$5,631 \times 55\% = \$3,097.05}$$

This calculation shows how 55% of the total market-making yield is allocated as static personal earnings, resulting in a net benefit of \$3,097.05.

## 2. Direct Referral Reward

$$\text{\$5,631} \times 5\% = \text{\$281.55}$$

Settled in real time

This is the reward amount received for a direct referral, calculated as 5% of the market-making profit.

# 3. Ranks and Differential Commissions

Based on weaker leg volume

Rank	Volume (USDT)	Commission
R1	10,000	5%
R2	50,000	8%
R3	250,000	11%
R4	1,000,000	15%
R5	2,000,000	20%
R6	4,000,000	25%
R7	10,000,000	5% Global pool

**Higher rank = higher differential rate / Earn up to 60 levels of depth**

# 4. How Compound Interest Works

With a monthly return of 30.9%

Month	Opening Balance \$	Monthly Personal Profit \$	Closing Balance \$	Cumulative ROI %
1	10,000.00	3,096.94	13,096.94	30.97
2	13,096.94	4,056.05	17,152.99	71.53
3	17,152.99	5,312.18	22,465.17	124.65
4	22,465.17	6,957.33	29,422.50	194.22
5	29,422.50	9,111.97	38,534.47	285.34
6	38,534.47	11,933.90	50,468.37	404.68
7	50,468.37	15,629.76	66,098.13	560.98
8	66,098.13	20,470.20	86,568.33	765.68
9	86,568.33	26,809.70	113,378.03	1,033.78
10	113,378.03	35,112.51	148,490.54	1,384.91
11	148,490.54	45,986.65	194,477.18	1,844.77
12	194,477.18	60,228.44	254,705.63	2,447.06

# Why is it powerful?

## **50/50 Split**

50% automatically buys BIN and  
50% automatically buys ROX

## **Black Hole**

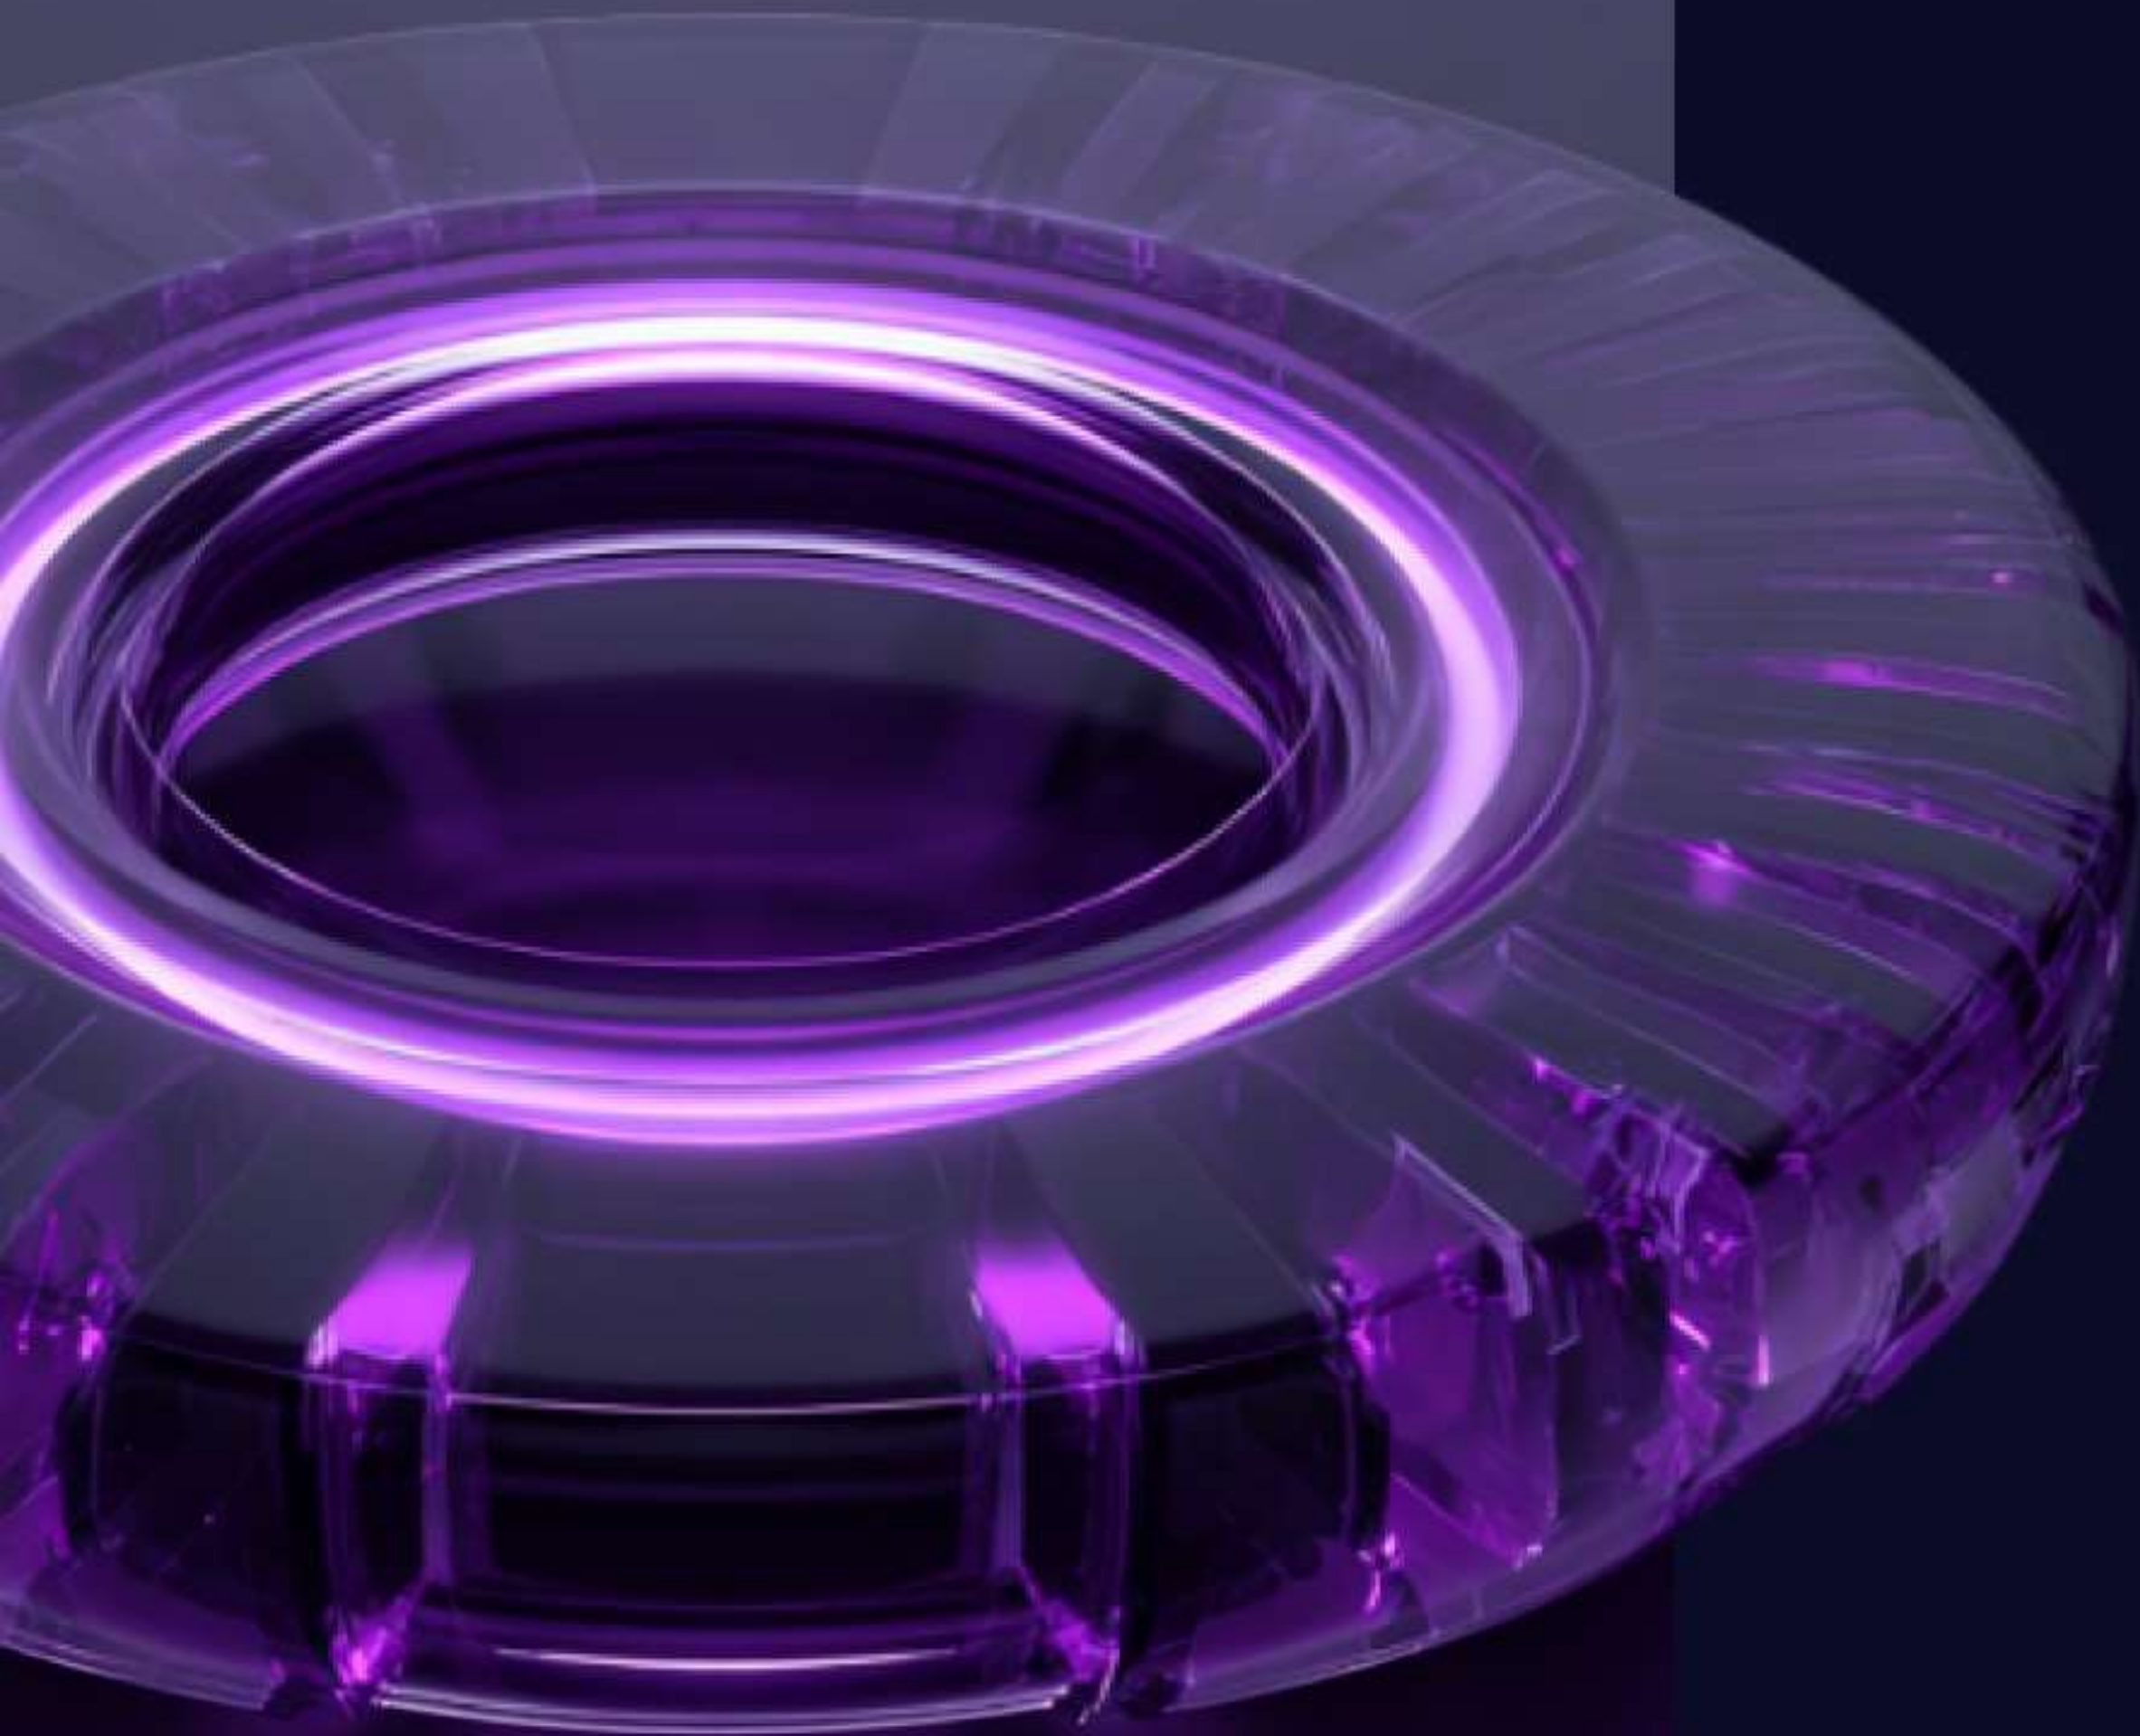

Permanently locked LP:  
non-recoverable, non-modifiable

## **Total Security**

Permanent liquidity with no risk  
of mass withdrawal

## **Constant Activity**

Automatic purchases every  
minute keep the market active

# Value Scheme

Funds in the “rate limiter” flow progressively into the market over 7 days.

This results in:

- Upward momentum
- Constant upward pressure
- Expansion of the ROX ecosystem value
- Stable growth of token prices

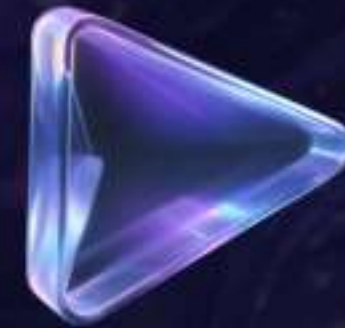

# Reward Structure

## Market Engine Yield

Income generated through automated market-making

**\$4K**  
**Approx.**  
**R1 monthly**

## Network/Team Bonuses

From R1 to R3+ with tiered rewards

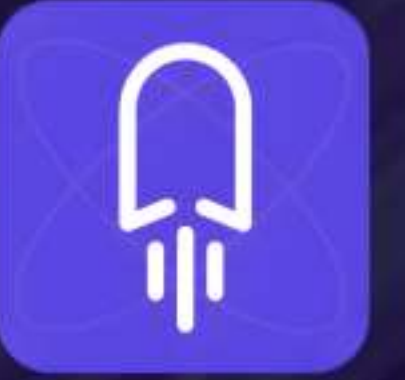

**\$23K**  
**R2 monthly**  
**Plus weekly pool**

## Weekly and Monthly Pools

Additional rewards for higher ranks

**\$100K+**  
**R3 monthly**  
**All sources combined**

## Fund Security

LP 100% locked in a black hole contract.

## Token Value

Only 21M ROX – 18M locked forever.

## Self-Propelled Growth

Cycle system + FOMO pools + rewards.

## Sustainable Yield

Real income from market-making and fees.

## Fair Distribution

Fully on-chain, transparent, with no hidden privileges.

# Protocol Security

**ROX addresses the 5 problems of modern DeFi.**

# Key Advantages

## **Sustainable Model**

Real and verifiable on-chain revenue

## **Real Scarcity**

Limited supply with locked tokens

## **Instant Rewards**

Automatic and transparent distribution

## **Locked Liquidity**

Permanent security with no withdrawal risk

## **24/7 Purchases**

Automated system with no manual intervention

## **Compound Yield**

Very high rates with automatic reinvestment
